Online Bookstore System

An online bookstore software projects that acts as a central database containing various books in stock along with their title, author and cost. This project is a website that acts as a central book store. This web project is developed using asp.net as the front end and sql as a back-end. The sql database stores various book related details. A user visiting the website can see a wide range of books arranged in respective categories. The user may select desired book and view its price. The user may even search for specific books on the website. Once the user selects a book , he then has to fill in a form and the book is booked for the user.

Features:

- Online Registration/Login.
- User registration.
- Book Inventory management.
- Book booking & availability check.
- Admin area.

Software Requirements:

- Windows Xp, Windows 7(ultimate, enterprise) , Windows 10
- Visual studio Code

Hardware Components:

- Processor – i3
- Hard Disk – 5 GB
- Memory – 1GB RAM

Advantages:

- Customers can get their book delivered instead of actually going and buying the book. They can make payment online itself.
- Managing of inventory in the shop for shopkeeper becomes easier as customers are not visiting and ordering online.
- This system saves both time and travelling cost of customers.
- User can get to know different kinds of books that they were unaware of by just searching in the system using keywords.

Disadvantages:

- The only disadvantage is if the customer receives a book that is not in proper condition or has some kind of defect then there incurs an additional charge of posting it back.

Conclusion:

- The system can be very well used by the book shopkeepers to expand their customers.
- The system can also be implemented in publishing houses.
